

40'DV – Standard

DRY FREIGHT CONTAINERS - 40'DV – STANDARD

40 foot (40') standard containers compared with the 20 foot often are used for relatively light cargo – furniture, equipment, clothes, cosmetics, food, electronics, etc.).

This container type is intended for general cargo transport and is used for general use in dry freight transport. The 40-foot container protects the cargo from natural and climatic influences, it has solid steel walls, roof and wooden floor. Equipped with secure and hermetically sealed doors.

40'HC – High Cube

SAUSO KRAVU 40' AUGSTIE KONTEINERI HIGH CUBE- 40'HC

40 foot High Cube (40'hc, high) container – is one feet (30 cm) higher than standard 40 foot container. Often use of the high container can significantly reduce the cost of transportation because of increased intensity of the load.

This type of container is used for heavy cargo and general purpose dry cargo transportation. 40HC foot trays are good for protecting loads from natural and climatic influences, with solid steel walls, roof and wooden floors. Equipped with secure and hermetically sealed doors.

40 foot High Cube container – it is a special construction, designed for transportation and storage of a wide range of freight

40'PW – Palletwide

DRY FREIGHT CONTAINER - 40'PW – PALLETWIDE – WIDER FRO EURO – PALLET

The increase of width of the Standard container for 5 cm allows placing in it side by side 2 standard euro – pallets 120 cm - wide. Currently equipment of many container ships, allows to place 40'PW – PALLETWIDE wider containers in standard container slots.
