

## Open Side Container (Side Doors)

Side Door Container / has the same configuration as a standard 20/40 dry container but with the full side access doors, which makes convenient loading with the forklift truck. Mainly is used for cargo which is hard to access.

This container is designed for longitudinal and oversized loads. The loading can be done either through the standard door or with a completely open sidewall, which gives good access to the load.

Most commonly used as:

- a trading point
- exhibition pavilions
- loading and transporting oversized loads.
